(a) Attention Head Circuit with Hook Points

(b) FRA Decomposition and Intervention

Intervention Modes

QK to QK

Scale SAE activations at post-LN
Modifies Q, K, AND V for all heads
Broad perturbation

OV steering (QK-to-OV / OV-to-OV)

Add $\alpha * f_{\lambda} * W_{dec} * W_V$ to $hook_v$
Modifies only targeted KV head
Narrow, pathway-specific

Key insight: rank features by one circuit, intervene through another

Localized behavior (sleeper): OV steering suffices
Distributed behavior (emergent misalignment): QK-to-QK needed
