

Per-feature contribution distributions: model-diffing (OV, QK, resid_mid) vs activation-diffing (ln1)
K1 (single, fixed) vs randpos-K8 (multi, random)

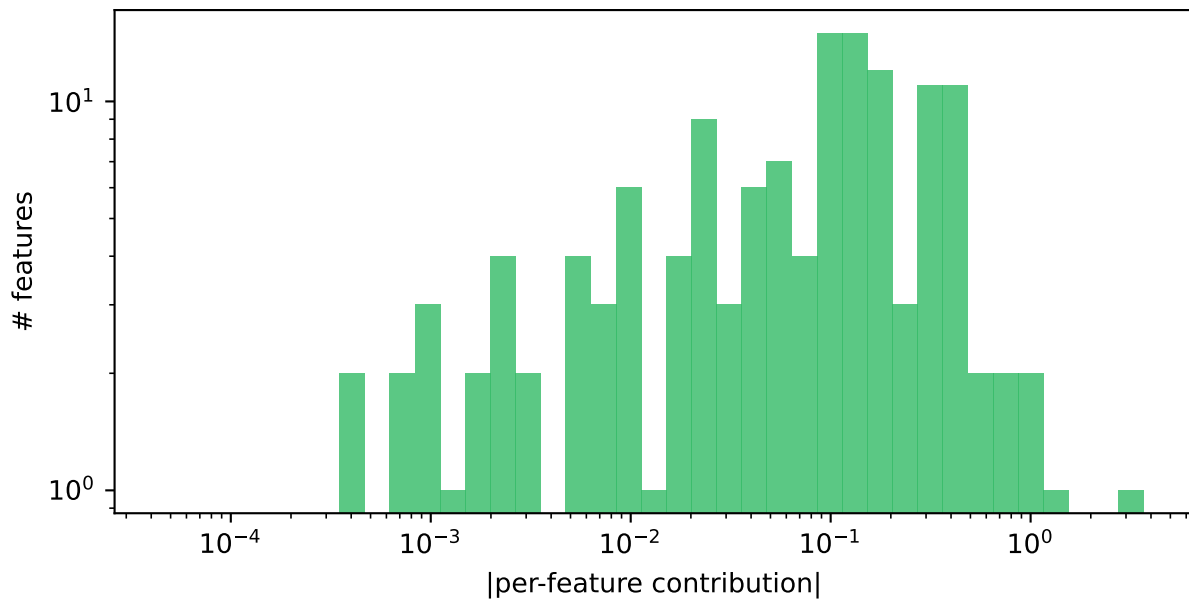

OV weight-diff (Δg) — k1
PR=35 nonzero=139 top: f1889, f455, f56

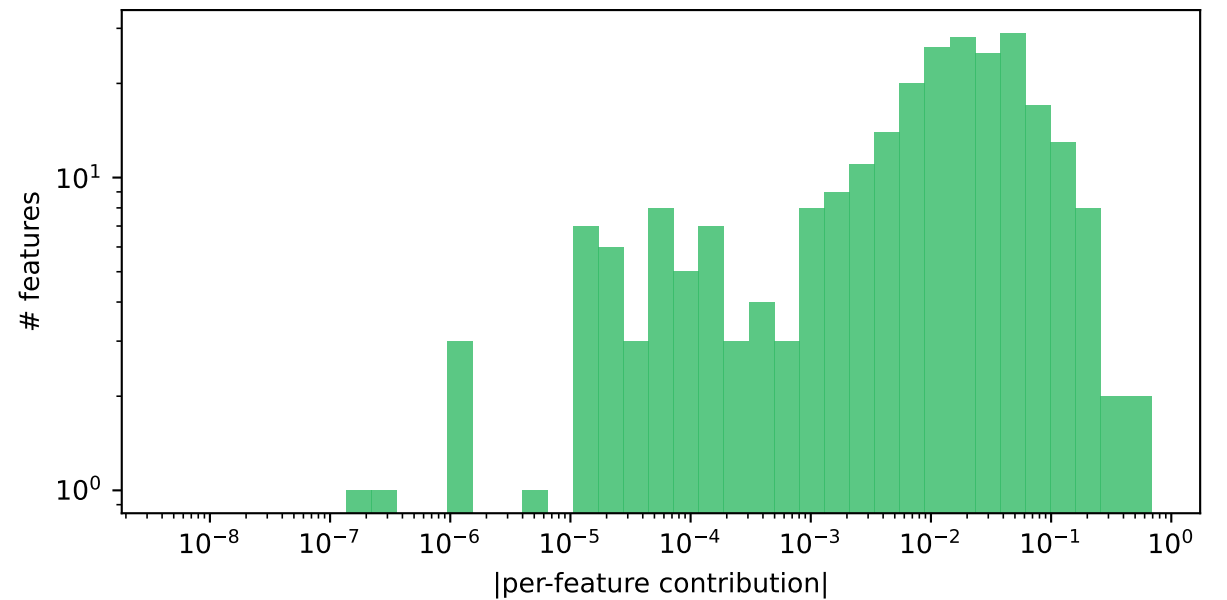

OV weight-diff (Δg) — randpos
PR=33 nonzero=265 top: f1307, f152, f783

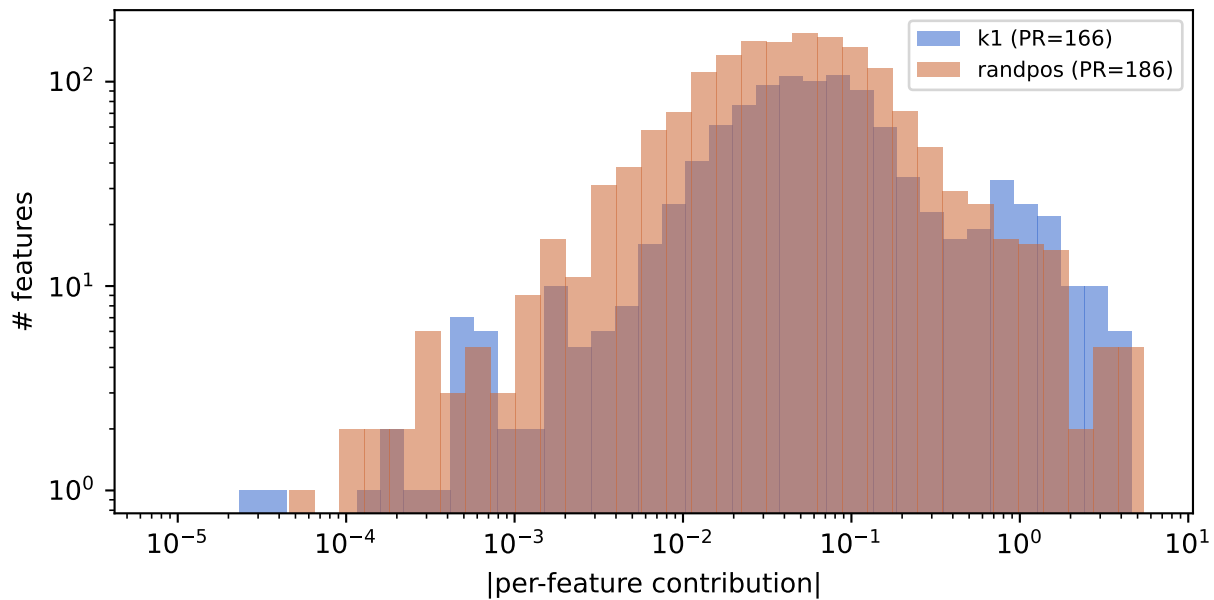

QK weight-diff — k1
PR=28 nonzero=139 top: f455, f409, f1889

QK weight-diff — randpos
PR=55 nonzero=265 top: f1307, f1709, f79

ln1 input-diff (deploy-clean) (conventional)

resid_mid model-diff ($z_s - z_b$) (proper model-diff)
